

Dkt. No.: OP-093000198

AMENDMENTS TO THE CLAIMS:

1. (Currently amended) A computer casing having a front board, a back board, a bottom board, a top board, a left side board and a right side board, comprising:

an internal space formed by the front board, the back board, the bottom board, the top board, the left side board and the right side board, for mounting a mother board, a CPU, a heat dissipating device and plural electrical elements therein, wherein the mother board is mounted on the bottom board, the CPU and the plural electrical elements are mounted on the mother board and the heat dissipating device is mounted on the CPU; and

a dent portion a supporting structure formed on the bottom board corresponding to a location of the CPU and the heat dissipating device, wherein the supporting structure includes depressed outwardly from the internal space to provide a structural strength stronger than any other part of the bottom board so that the CPU and the heat dissipating device are supported to be positioned above the dent portion and the dent portion endures the weight of the heat dissipating device to prevent a shape deformation around on the bottom board.

2. (Currently amended) The computer casing according to claim 1, further comprising wherein the supporting structure further includes a plurality of pillars protruded at four corners thereof corners of the dent portion, respectively, and a plurality of fixing elements are used to fix the heat dissipating device to the mother board by passing through the mother board to screw in corresponding pillars, respectively.
